Solide Carbide Milling

ZCC Cutting Tools Europe GmbH

your Partner | your Value

WELCOME TO ZCC CUTTING TOOLS EUROPE

ZCC-CT, one of the World's leading carbide tooling manufacturers, welcomes you to its products. We are able to offer you a wide product range of high performance cutting tools at economic prices and a good supply service to support the production and productivity at your manufacturing facilities. You will find the main tool types in the various sections of the catalogue, Turning is in section A, Milling in section B and Drilling in section C of the catalogue.

We are looking forward to working with you and developing good cooperation together. Our team at ZCC Cutting Tools Europe is ready to support you in all of your requirements.

Member of Minmetals Group

Coated cemented carbide PVD

Grade	Grade description
KMG303	PVD coated carbide substrate for universal milling application of steel (up to HRC≤48), stainless steel and cast iron.
KMG405	PVD coated carbide substrate for high performance milling application of steel (up to HRC <55), stainless steel, super alloy material and cast iron. High wear resistance and toughness for a wide application field.
KMG555	PVD coated carbide substrate for hard milling application of steel (HRC 55–68), highest wear resistance and toughness for best cutting result.
KMG309	PVD coated carbide substrate for non ferrous materials. High wear resistance even in abrasive materials.

Uncoated cemented carbide

Grade	Grade description
YK30F	Uncoated K30 carbide substrate for steel, stainless steel, cast iron and non ferrous materials.
YK40F	Uncoated K20–K30/N20–N30 carbide substrate for cast iron and non ferrous materials.

GM series

For general applications

- For machining of steel to max. 50 HRC and cast iron to heat-resistant alloys.
- Sharp cutting edge with high edge stability. Roughing to finishing with long tool life.
- End mills, ball nose cutters, torus mills, rippers and mini cutters
- Diameter range 0.3–20.0 mm

PM series

For demanding applications

- For machining of steel to max. 55 HRC and cast iron to heat-resistant alloys.
- Very solid cutting edge with high stiffness for higher cutting speeds and feed rates.
- End mills, ball nose cutters, torus mills and high feed mills
- Diameter range 3.0–20.0 mm

Application fields for machining of steel

HM series

For machining of hardened materials

- For machining of steel up to 68 HRC.
- Very stable cutting edge with high stiffness and newest coating technology for high cutting speeds and feed rates.
- End mills, ball nose cutters, torus mills and mini cutters
- Diameter range 0.3–20.0 mm

NM series

For machining of copper

- For machining of copper and copper alloys (brass, bronze).
- Excellent sharpness of cutting edge for very good surface quality.
- End mills, ball nose cutters and mini cutters.
- Diameter range 0.5–20.0 mm

A

End mill General machining of non-ferrous metals

5502R402NM

AL series

For machining of aluminium alloys

- For machining of aluminium alloys.
- Newly developed geometries expand our standard program:
 - ALP for high-speed roughing
 - ALG for finishing with very good surface quality
 - AIR torus mills for ultra high-speed machining
- End mills, ball nose cutters, torus mills and rippers
- Diameter range 1.0–20.0 mm

A

End mill General machining of Al and Al alloys

HPC series

High Performance Cutter (HPC)

- For roughing and finishing of steel up to 55 HRC, stainless steel and cast iron.
- Geometry with unequal helix angle (38°/41°) and unequal pitch for smooth machining without vibrations.
- End mills and torus mills
- Diameter range 4.0–20.0 mm

A

End mill HSC/HPC machining

5501R38414GM

- Type of shank DIN 6535HA
- Centre cutting
- Helix angle 38°/41°

UM series

High Speed Cutter (HSC)

- For roughing and finishing of steel up to 55 HRC, stainless steel and cast iron with high metal removal rate.
- Optimised geometry with unequal helix angle (38°/41°) and unequal pitch.
- End mills and torus mills
- Diameter range 4.0–20.0 mm

VSM series

With sharp cutting edge for heat-resistant alloys

- For roughing and finishing of steel, stainless steel and heat-resistant alloys with high metal removal rates.
- Sharp cutting edge with unequal helix angle (38°/41°) and unequal pitch.
- Smooth machining without vibrations.
- End mills and torus mills
- Diameter range 4.0–20.0 mm

Note: The above cutting data are guide values, which were determined under ideal conditions. The values have to be adapted in individual cases.

1. Select the appropriate product series.
2. Determine the immersion.
3. Select the used material and read the cutting speed.
4. Determine the feed rate group and have a look at the appropriate feed rate recommendations.
5. Select the diameter of tool and determine the immersion.

Difference between up-milling and down-milling

Up-milling

Down-milling

V_f Feed rate tool
 V_w Feed rate work piece
 n Rotation

Up-milling: the feed direction of the work piece is opposite to that of the milling rotation at the connecting position.

Down-milling: the feed direction of the work piece is the same as that of the milling rotation at the connecting position.

Advantages and disadvantages

Direction	Advantages	Disadvantages
Up-milling	<ul style="list-style-type: none"> - Prevents hooking of tool - More smooth cut 	<ul style="list-style-type: none"> - Bigger stress on cutting edge - Shorter tool life
Down-milling	<ul style="list-style-type: none"> - Higher tool life - Less thermal stress 	<ul style="list-style-type: none"> - Hooking of tool possible

Pitch selection

The pitch is the distance between one point on one cutting edge and the same point on the next edge. Milling cutters are mainly classified into wide, normal and fine pitches.

B

Milling

Operational stability		
L (low)	M (medium)	H (high)
Wide pitch	Normal pitch	Fine pitch
		
When the milling width is equal to the diameter of the cutter, the machining system is stable and main power of machine is sufficient, selecting a wide pitch can achieve high productive efficiency.	General milling function and multiple mixed productions.	When the milling width is less than the diameter of cutter, cutting by maximum edges can achieve high productive efficiency.

C

Drilling

Approach angle

The approach angle is composed by insert. Tool body, chip thickness, cutting forces and tool life are affected especially by the approach angle. Decreasing the approach angle reduces chip thickness and spreads the cutting area between cutting edge and work piece for a given feed rate. A smaller approach angle also guarantees stable entering or exiting the work piece, to protect the cutting edge and extend tool life. However this will increase higher axial cutting forces on the work piece, thus it is not suitable for machining thin work pieces such as thin plates.

D

Technical Information

Approach angle	Feed rate per tooth	Max. cutting depth
90°	f_z	$h_{ex} = f_z \times \sin \kappa_r$
75°		$h_{ex} = 0,96 \times f_z$
60°		$h_{ex} = 0,86 \times f_z$
45°		$h_{ex} = 0,707 \times f_z$
Round		$h_{ex} = \frac{\sqrt{iC^2 \times (iC - 2a_p)^2}}{iC} \times f_z$

General formulas

V_c : Feed rate [m/min]
 D_c : Nominal diameter of milling tool [mm]
 n : Spindle speed [u/min]
 z_n : Number of teeth
 Q : Metal removal rate [cm³/min]

V_f : Feed rate of worktable (feed speed) [mm/min]
 f_z : Feed rate per tooth [mm/z]
 π : ~3,14
 T_c : Machining time [min]
 f_n : Feed rate per revolution [mm/u]

Cutting speed	$V_c = \frac{\pi \times D_c \times n}{1000} \text{ [m/min]}$
Spindle speed	$n = \frac{1000 \times V_c}{\pi \times D_c} \text{ [rev/min]}$
Feed rate of work table	$V_f = f_z \times n \times z_n \text{ [mm/min]}$
Feed rate per tooth	$f_z = \frac{V_f}{n \times Z_n} \text{ [mm/z]}$
Feed rate per revolution	$f_n = \frac{V_f}{n} \text{ [mm/rev]}$
Machining time	$T_c = \frac{1000 \times V_c}{\pi \times D_c} \text{ [min]}$
Metal removal rate	$Q = \frac{a_p \times a_e \times V_f}{1000} \text{ [cm}^3\text{/min]}$

Function of angles when face milling

Main angles

Angle	Feature	Effect		
Axial rake angle r_f	Influences chip direction	Negative angle, good chip removal		
Radial rake angle r_p	Influences cutting edge sharpness	Positive angle, good cutting performance		
Approach angle Kr	Influences chip thickness	$Kr \uparrow$, chip thickness \uparrow , $Kr \downarrow$, chip thickness \downarrow ;		
Rake angle R	Influences cutting force	Poor cutting performance, stable cutting edge	$(-) \leftarrow 0 \rightarrow (+)$	Good cutting performance, unstable cutting edge
Inclination angle λ_s	Influences chip flow direction	Poor cutting performance, stable cutting edge	$(-) \leftarrow 0 \rightarrow (+)$	Good cutting performance, unstable cutting edge

Combination of different rake angles

		Double positive	Double negative	Positive/Negative
Negative rake angle				
Neutral angle				
Positive angle				
Axial rake angle r_f		+	-	+
Radial rake angle r_p		+	-	-
Application field	P	√		√
	M	√		√
	K		√	√
	N	√		
	S	√		√

Indexable milling

Cutting performances of different approach angles

Approach angle	Depiction	Explanation
45°		Axial force is largest. It will bend when machining thin-wall work piece, and reduces the precision of work piece. It is benefit to avoid fringe breakage of work piece when machining cast iron.
75°		The main purpose is to resolve the radial cutting force, it is often used for general face milling.
90°		The axial force is zero in theory, suitable for milling thin plate workpiece.

Inserts with wiper

Using standard inserts	Using inserts with wiper
	
Normal surface quality	High surface quality

The wiper insert must protrude below the other inserts by 0.03–0.10 mm at axial direction, only that the wiping function can take into effect. Generally speaking, a cutter can assemble only one wiper insert. If the diameter of cutter is much bigger or cutter's feed rate per revolution is bigger than the length of wiper edge, 2 to 3 wiper inserts can be assembled.

Cutting width

Generally speaking, the relation between cutting width and tool cutting diameter is $D_c = (1.2-1.5) a_e$.

In the machining practice, it needs to avoid coincidence of tool center and workpiece center as much as possible.

D_c : Tool diameter
 a_e : Lateral infeed

Length of cutting edge (overhang) and cutting diameter

The shorter the overhang, the stronger the rigidity. Thus isn't easy to generate. Bend and vibration in the cutting process may occur.

Length (overhang) increases by 1 time, the deflection degree (f) will be 8 times of the former one.

**Reduce the overhang by 20 %
the deflection degree (f) will decrease by 50 %**

**Increase the diameter by 20 %
the deflection degree (f) will decrease by 50 %**

$$f = \frac{F \times l^3}{3 \times E \times I} = \frac{F \times l^3 \times 64}{3 \times E \times I}$$

Solid carbide mills

Machining strategy – HPC/UM (HSC) milling cutters

HPC = High Performance Cutting

Machining with significantly increased metal removal rate through higher cutting speeds and feed rates compared with conventional machine cutting processes.

Full-slot milling

A

Turning

B

HSC (UM) = High Speed Cutting

High cutting speeds and feed rates in combination with low cutting depths lead to lower chip thickness as in normal machining.

Profiling

Trochoidal milling

Milling

C

Drilling

The UM milling cutter is specifically optimised for HSC machining.

High metal removal rates can be realised with this tool.

Especially on highly dynamic machines with optimised tool paths this milling cutter shows its full potential.

D

Technical Information

Index

Solid carbide mills

HSC strategy

It's important to use the right strategy. When programming make sure the width of cut is kept. The width of cut is usually not higher than 15%. Regarding the depth of cut, the total length of the cutting edge can be used.

$$h_{max} = 2f_z \sqrt{\frac{a_e}{d} \left(1 - \frac{a_e}{d}\right)}$$

When changing the width of cut the cutting data needs to be adjusted. As calculatory size applies a chip thickness from approx. 0.15–0.2 mm on basis of the usual steel types.

Example

Tool	Machining
 <p>UM-4E-D20.0-W KMG405</p>	 <p>HSC strategy</p>

Workpiece material	16MnCr5 (1.7131) ca. 700 N/mm ³
Cutting data	
V _c	550 m/min
n	8750 U/min
f _z	0.3 mm/z (h_{max} = 0.19 mm)
V _f	10500 mm/min
a _p	22 mm
a _e	2.3 mm

Result

Chip removal rate **530 cm³/min!** Machining time 58 seconds! The maximum chip thickness is 0.19 mm.

Solid carbide mills

Feed rate selecting table for profile machining with ball nose cutters and torus mills

$$R_y = R \times \{1 - \cos [\arcsin(fr/2R)]\}$$

Ry: Theoretical values of surface quality

P: Feed rate

R: Radius of the ball nose cutter or torus mill

The Company

Zhuzhou Cemented Carbide Cutting Tools Co., Ltd. (ZCC-CT) is located in Zhuzhou, Hunan province, China and is the largest supplier of carbide tools into the Chinese market. The ZCC-CT cutting tool company is part of the "Zhuzhou cemented carbide Group" who manufacture carbide materials and powders. Both of these companies are part of the "Minmetals Corporation" who mine and produce raw tungsten carbide materials.

Since its foundation in 1953 ZCC-CT has developed rapidly by progressively using highly advanced modern production technology as well as having a highly qualified and committed workforce. With over 2,000 employees the company is now the largest producer of carbide cutting tools in China and one of the leading carbide manufacturers worldwide.

Using this advanced production technology, ZCC-CT products are manufactured to the highest quality standards to maintain a constant quality and high performance. The wide range of products contains indexable carbide inserts (coated and uncoated), inserts of Cermets, CBN, PCD and ceramics, solid carbide cutting tools as well as tool holders and milling bodies. The products are produced to various international standards such as ISO DIN, ANSI, JIS and BSI. Furthermore customised and special carbide product are also offered.

Research and development plays a major and significant role at ZCC-CT. The production facilities use the most sophisticated and advanced equipment available and this is supplied by the leading machine and equipment manufacturers in Germany and Switzerland. A highly qualified and skilled team of engineers in the R&D departments are constantly developing new and improved cutting tools. There is a constant desire to continually enhance the quality, to fulfill the ever increasing market requirements for new and initiative products and to achieve the best possible result for the customers.

The production and administration facilities in China are certified to ISO 9001:2000 and they maintain strict environmental management to ISO 14001:2004 standards.

Since 2003 ZCC Cutting Tools has operated a sales organisation in Europe. This sales and warehousing subsidiary of ZCC-CT is based in Düsseldorf (Germany) and has been progressively build up and expanded by Mr. Quanliang Zhao the European Managing Director.

Sales to all European countries, as well as Russia and Turkey, are controlled and managed from this European central warehouse in Düsseldorf, with the majority of the products being dispatched on the same day of ordering. The business operates under the quality management system for "Distribution and Logistics of Metal Cutting Tools" and is certified with DIN EN ISO 9001:2008.

ZCC Cutting Tools Europe has a constantly growing number of employees covering sales, marketing, warehouse and distribution, technical support, IT, HR and accounting. Our external sales team and our partners from around Europe are there to support you on-site in your production facilities or distribution operations. Our internal, highly qualified, technical application engineering staff are always available to give the customer technical advice and support via telephone, by email or in person. The internal sales team takes care of your enquiries and orders and together with dedicated warehouse staff they ensure that products are dispatched to you as quickly as possible.

The complete team at ZCC Cutting Tools Europe are there to support you and be your competent and efficient partner in the global Cutting Tool Industry.
